- Random and specific lock numbers available

Accessories

- Optional accessories provide a secure and complete system
- Various mounting options
- Clearing cards for shift change identification

The Counter Cache is a simple drop box with a separate, additionally secured, internal cassette with a capacity of 500 items.

Once inserted into the Counter Cache, the cassette provides temporary and safe storage at Point of Sale during opening hours. After closing time individual register contents can be stored in the cassettes in the overnight safe of your cash office. A number of safety devices are built in to protect both your hard-earned cash and your staff. The unit is opened using a key and the internal cassette can only be removed using a specialist security keyplate, which in turn seals the contents.

Add a plain or numbered Security Seal to your cassette to complete the audit trail and at the same time ensure against cassette tampering. The built in note restrictor prevents 'fishing' of bills from the unit once deposited.
